AWS TRUSTED ADVISOR

- AWS trusted Advisor is an AWS service that acts like an automated cloud expert.
- It continuously analyzes your AWS account and gives best-practice recommendations to help reduce cost, improve security etc.
- It scans resources and check them against AWS best practice in five key categories

• Features

- ① Provides real-time best prac recommendation for AWS
- ② Helps reduce cost by identifying unused or underutilized resources
- ③ Improves security posture by detecting misconfigurations and risks
- ④ Enhances performance and fault tolerance of AWS workload
- ⑤ Monitors AWS service limits to prevent resource exhaustion
